TO WHOMSOEVER IT MAY CONCERN

Earlier we were installed Servo Stabilizer on airjet pifron Machines.

We were facing frequent tripping , PCB, and driver cards failures in our machineries.

Then we found TSi' s Static Voltage Regulator called VRp with modern technology of IGBT and 20ms correction rate.

We decided to install 1 no. of TSi' s precision PWM Static Voltage Regulator of 130KVA in 2014, on our 26nos pifron make airjet machine.& Later on also install 50kva TSi's static voltage regulator on prasant gamatex worping machine.

We are very happy to certify that TSi VRp unit are energizing our all machineries excellently for over six years now.

We are confident these unit will continue to perform well in future also.

We are now strongly recommending TSi-VRp to other Textiles Machinery.

Tsi-VRp is an excellent technology product, which is ideally suited for textile machinery.

Best wishes to Tsi.
