TO WHOMSOEVER IT MAY CONCERN

This is to certify that we have been powering our plant lighting thru TSi-VRP. We are extremely satisfied with their unique IGBT Based PWM Static Voltage Regulation Technology with 20ms correction rate.

Initially to understand technology and performance we took one 50KVA unit free trial for 15days. We found 10% saving after installation of TSi VRp where output voltage is 400V +/-1%.

We appreciate this modern technology which could provide real time protection not only from voltage fluctuation but can also during sags, swell and transients. Which is need for today's modern machines using lot of power electronics.

After successful results we bought one no 50KVA and four nos 75KVA.

In these two and half years, we have not faced any maintenance related issues with TSi-VRP.

We are extremely satisfied with the unparalleled performance of TSi-VRP.

We appreciate this technology and have full faith & trust in the services being offered by Team TSi.

We wish them good luck.
