## TO WHOMSOEVER IT MAY CONCERN

We have installed TSi VRp in our Group of Bapasitaram since 2014.

In the earlier stage, we used servo voltage stabilizers but after getting the performance of TSi VRp to protect different machines from tripping, PCB burning & driver card failures which were not available easily in India, now we are using TSi's IGBT-based static voltage regulator only.

Its electronics design is maintenance-free and provides pure power to all machines without surge, spike, and noise.

In Bapasitaram Textiles we have installed TSi VRp 130KVA on Pifron make air-jet machines and TSi VRp 50KVA on Prashant Gamatexwarping machine.

In Bapasitaram Synthetics we have installed TSi VRp 160KVA and 250KVA on the same Pifron make air-jet machines.

In Bapasitaram Industries we have installed TSi VRp 130KVA 3 no's, and 200KVA 1 no's to protect Itema rapier autoloams and other textile machines.

Tsi-VRp is an excellent technology product, which is ideally suited for textile machinery.

Best wishes to Tsi.
